SecurePix by Norton Labs - Product Privacy Notice

March 30, 2021

SecurePix by Norton Labs
SecurePix is an app which allows you to scan the photos saved on your mobile device, categorizing them for better awareness of the types of photos you have on your phone. SecurePix allows you to remove categorized photos from your library and, optionally, store them inside our app's local, on-device vault. The current categories into which photos are placed include: Receipt, Credit Card, Driver's License, Passport, NSFW, and Potentially Sensitive Document. The app works offline and does not transfer your photos off your mobile device, unless you explicitly request such a transfer using the iOS share menu (e.g., to include a picture in a text message).

	Categories of Data and Personal Data Collected	Purpose of Processing Your Personal Data
Data You Provide:	User Data may include: • Email Address • Email content from User	User Data: This data is processed to administer the feedback from the User on the functioning of the app for the beta test.

Data We Collect/Access:	User Data may include:
	▪ Scan information including:
